Technical data

Product	Clumping cat litter
Material	Natural mineral bentonite
Origin	Our own deposit, Zapala, Neuquén (Argentine Patagonia)
Grain size	1.5 to 3.5 mm
Fragrance	Fragrance-free
Water absorption	305% of its weight
Clump formation	11 seconds (20 ml of water → 66 g clump)
Clump strength	Stays whole after a 30 cm drop
Dust (200 mesh)	2.0% of particles under 0.075 mm
Bulk density	1.035 kg/L (4 kg bag ≈ 3.9 liters)
Pack sizes	4, 8 and 16 kg bags

How to use

- 1 Fill the litter box with at least 6 cm of Stonecat.
- 2 Scoop out the clumps every day.
- 3 Top up what you removed and replace it all every 3 weeks.

Care: don't mix it with other litters, don't flush it, and store it in a dry, covered place.
